

**CLAIM SUMMARY DOCUMENT****CLAIMSWE CLAIM:**

1. (Currently Amended) Device for fastening a guide rail (3) to a wall (1), particularly a rear wall of a slide guide, having a guide rail (3), on which a bent web-shaped holding device (6) is provided on the end side, which holding device (6) can be connected with a fitting (2) which can be fixed on a wall (1), the fitting (2) having an upper and a lower side wall (20, 21) which are mutually connected on a guiding section (26) by way of a rearward wall (22) and a forward wall (23), and the web-shaped holding device (6) being displaceably disposed in the guiding section 26, characterized in that the fitting (2) has a side wall (24) spaced away from the guiding section (26), and the guide rail (3) can be continuously displaced between a first end position, in which the guide rail (3) rests laterally against the guiding section (26), and a second end position, in which the guide rail (3) rests against the side wall (24). A device for fastening a guide rail, having a web-shaped holding element, to a wall, the device comprising:

a fitting having an upper wall and a lower wall that are connected on a guiding section of the fitting by a rearward and a forward wall, and the holding element is adapted to be displaceably received in the guiding section; and

the fitting having a side wall spaced away from the guiding section, and the guide rail being adapted to be continuously displaceable between a first end position, in which a portion of the guide rail rests against the guiding section, and a second end position, in which a portion of the guide rail rests against the side wall.

2. (Currently Amended) Device ~~The device according to Claim 1, characterized in that wherein the web-shaped holding element device (6) is held in a clamping manner in the elastic guiding section (26).~~

3. (Currently Amended) Device ~~The device according to Claim 1 or 2, characterized in that the wherein a distance between the side wall (24) and the guiding section (26) of the fitting (2) is smaller than the a longitudinal length of the web-shaped holding element device (6) of the guide rail (3).~~

4. (Currently Amended) Device ~~The device according to one of Claims 1 to 3~~ Claim 1, characterized in that wherein the web-shaped holding element device (6) has ~~includes~~ two webs (7, 8) legs, which can each be inserted into a receiving device formed on the guiding section (26).

5. ~~(Currently Amended) Device~~ The device according to ~~one of Claims 1 to 4~~ Claim 1, characterized in that, during the mounting, wherein the web-shaped holding element device (6) can be inserted by means of ~~is~~ mounted into the guiding section by a combined sliding and swivelling movement into the guiding section (26).

6. ~~(Currently Amended) Device~~ The device according to ~~one of Claims 1 to 5~~ Claim 1, characterized in that wherein the web-shaped holding element device (6) is guided in the an area of the guiding section (26) and adjacent to the guiding section (26) in an essentially form-locking manner ~~on~~ by the upper and lower side walls (20, 24) of the fitting (2).

7. ~~(Currently Amended) Device~~ The device according to the preamble of Claim 1, characterized in that at least one web (25) is provided in wherein the guiding section (26) includes at least one web, and, for the guidance, the at least one web rests on a profiling (17) of the web-shaped holding element device (6).

8. ~~(Currently Amended) Device~~ The device according to ~~one of Claims 1 to 7~~ Claim 1, characterized in that, a curved profiling (17) is provided ~~on~~ wherein the web-shaped holding element device (6) includes a profiling, and the at least one web includes one or more (25) rests by means of two edges that rest on the profiling.

9. ~~(Currently Amended) Device~~ The device according to ~~one of Claims 1 to 8~~ Claim 1, characterized in that, wherein at least one plugs (29) are is shaped onto the rearward wall (23) of the fitting (2), which at least one plugs (29) can be hung is fitted into at least one openings opening (10) on a the wall (1).

10. ~~(Currently Amended) Device~~ The device according to Claim 9, characterized in that wherein the at least one plugs (29) have has a flange section (18), and a the wall (1) can be inserted is between the flange section (18) and the rearward wall (22) of the fitting (2) after the at least one plug is fitted into the at least one opening.

11. ~~(Currently Amended) Device~~ The device according to ~~one of Claims 1 to 10~~ Claim 1, characterized in that wherein the guide rail (3) has an essentially is substantially C-shaped ~~construction~~, and the web-shaped holding element device (6) is bent away from the a center section (3) of the "C" C-shaped guide rail.

12. (New) The device according to Claim 1, wherein the guiding section is constructed to be elastic.

13. (New) The device according to Claim 8, wherein the profiling is curved.
